Experiment 2

Property Buying & Rental

Aim

To create a Property Buying & Rental application on the Zoho One cloud platform using Zoho Creator, and to demonstrate how a Software as a Service (SaaS) application lets users enter and view property details through a web browser, with all data stored in the cloud.

Procedure

1. Sign in to the Zoho One cloud portal with a valid account.
2. From the list of Zoho One applications, open **Zoho Creator**.
3. Click **Create Application** and create a new application for property buying and rental.
4. Add a new form named **Property Buying & Rental**.
5. Add the following fields to the form:
    - Contact Person (Name field – first and last name)
    - Property Title (Single Line text)
    - Area Size (Number field)
    - Contact Phone (Phone field with country code +91)
    - Contact Email (Email field)
    - Property Address (Address field – address lines, city, state, postal code, country)
6. Choose the correct field type for each field so that the data is stored in the right format.
7. Arrange the fields neatly and keep the **Submit** button at the bottom of the form.
8. Save the form and open the application in the live (published) view.
9. Enter sample property details in the form and click **Submit**.
10. Open the **Property Buying & Rental Report** and check that the submitted record is stored in the cloud.
11. Open the record to view its full details, and repeat with different values to test the application.

Implementation

Input:

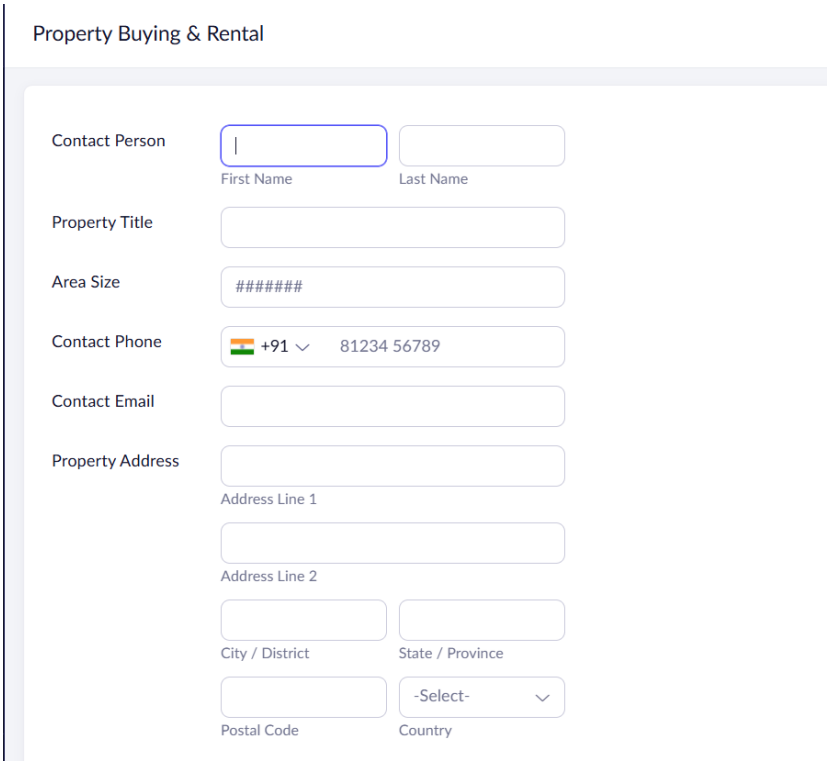

Fig. 1: Property Buying & Rental form

Output:

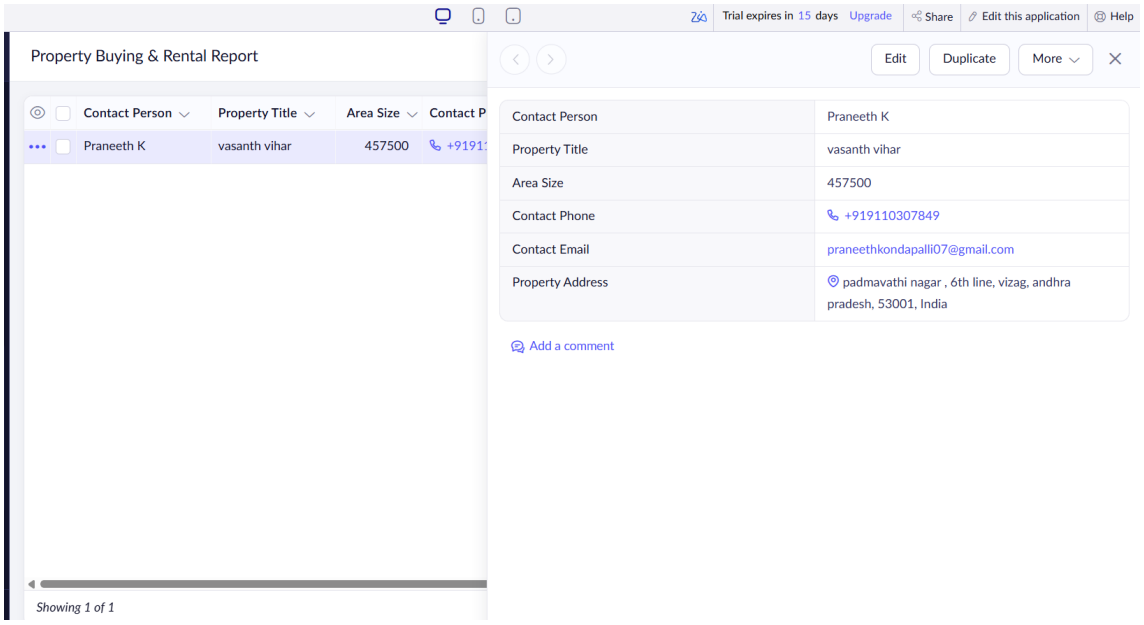

Fig. 2: Property Buying & Rental Report showing the stored record and its details

Result

Thus, a Property Buying & Rental application was successfully created using Zoho Creator in Zoho One. The submitted property details were saved in the cloud and displayed in the report, which shows that the application works as a Software as a Service (SaaS) solution.
