Experiment 1

Cab Booking Management Application Using Zoho Creator (Zoho One – SaaS)

Aim

To design and deploy an online Cab Booking application on the Zoho One cloud platform using Zoho Creator, and to show how a Software as a Service (SaaS) application lets users submit and manage bookings through a web browser without installing any software or maintaining servers.

Procedure

1. Sign in to the Zoho One cloud portal with a valid account.
2. From the list of Zoho One applications, open **Zoho Creator**.
3. Click **Create Application** and create a new application for the cab booking system.
4. Add a new form named **Book a Cab**.
5. Add the following fields to the form:
    - Customer Name (Name field – first and last name)
    - Employee ID (Single Line text)
    - Email Id (Email field)
    - Mobile Number (Phone field with country code +91)
    - Gender (Radio button – Male / Female)
    - Booking Date (Date field)
    - Travel Date (Date field)
    - Pickup Time (Drop-down)
    - Pickup Address and Destination Address (Address fields)
6. Set the field type and the mandatory (required) property for each field.
7. Arrange the fields in a clear layout so the form is easy to fill in.
8. Save the form and access the application in the live (published) view.
9. Enter sample booking details in the **Book a Cab** form and click **Submit**.
10. Open the **Bookings** report and check that the submitted record is stored in the cloud.
11. Open the record to view its complete details, and repeat with different values to test the application.

Implementation

Input:

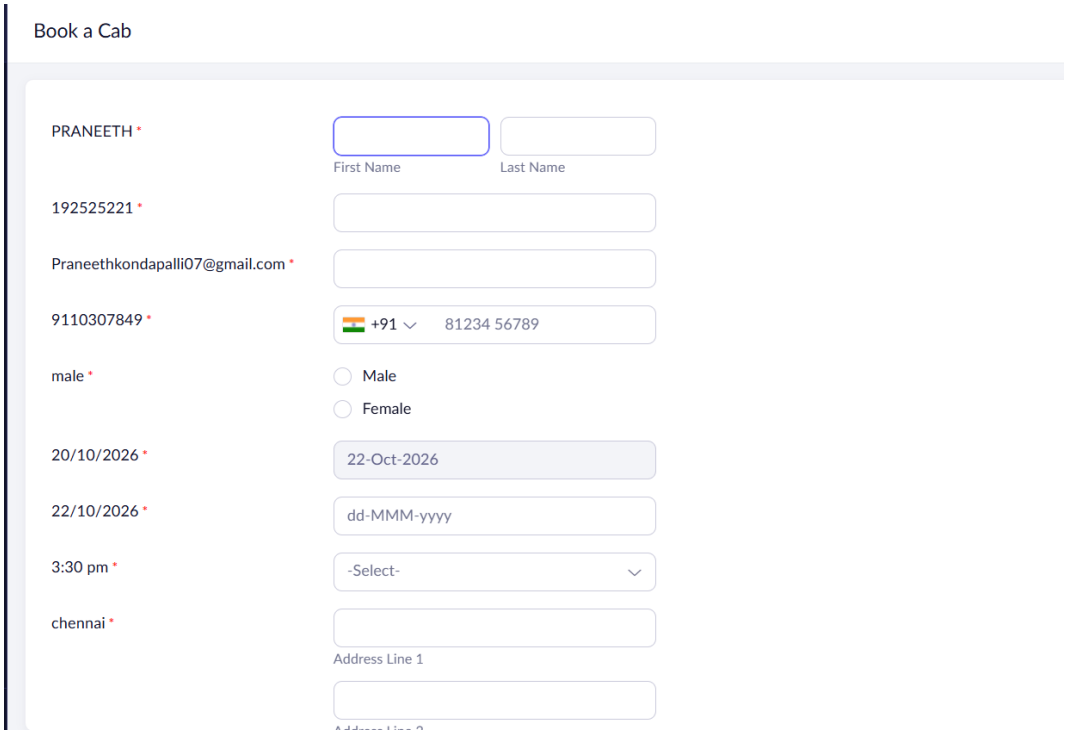

Fig. 1: Book a Cab form with the booking details entered

Output:

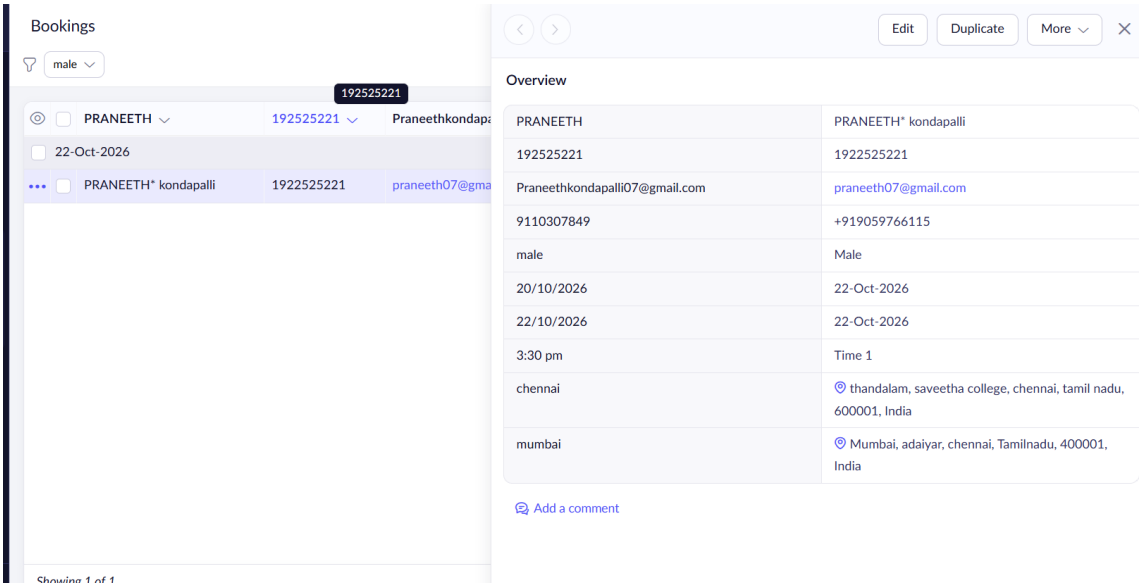

Fig. 2: Bookings report showing the stored record and its overview

Result

Thus, a Cab Booking application was successfully developed on Zoho Creator in the Zoho One suite. The submitted booking was saved in the cloud and displayed in the Bookings report, which shows that the application works as a Software as a Service (SaaS) solution.
